etymology is doubtful as is the physical extent of the area it designates its western frontiers seem clearly defined by its coastline yet the position of the british isles remains equivocal to outsiders they seem clearly part of europe to many british and some irish people however europe means essentially continental europe to the south europe ends on the northern shores of the mediterranean sea yet to the roman empire this was mare nostrum our sea an inland sea rather than a frontier even now some question whether malta or cyprus is a european island the greatest uncertainty lies to the east where natural frontiers are notoriously elusive if the ural mountains mark the eastern boundary of europe where does it lie to the south of them can astrakhan for instance be regarded as european the questions have more than merely geographic significance these questions have acquired new importance as europe has come to be more than a geographic expression after world war ii much was heard of the european idea essentially this meant the idea of european unity at first confined to western europe but by the beginning of the 1990s seeming able at length to embrace central and eastern europe as well amazon keyword europe europe history eastern europe western europe central europe europe information ebook european economy

Metal Ages / Âges des métaux 2023-08-24

eight papers ranging from the chalcolithic in northwest africa and iberia to the iron age in central europe shed light on issues as diverse as the principles of chronology building the role of alleged defensive enclosures pottery studies use wear analysis of iron age weaponry and the hallstatt la tène transition in the eastern alps

Enclosing Space, Opening New Ground 2019-03-31

enclosures are among the most widely distributed features of the european iron age from fortifications to field systems they demarcate territories and settlements sanctuaries and central places burials and ancestral grounds this dividing of the physical and the mental landscape between an inside and an outside is investigated anew in a series of essays by some of the leading scholars on the topic the contributions cover new ground from scotland to spain between france and the eurasian steppe on how concepts and communities were created as well as exploring specific aspects and broader notions of how humans marked bounded and guarded landscapes in order to connect across space and time a recurring theme considers how iron age enclosures created curated formed or deconstructed memory and identity and how by enclosing space these communities opened links to an earlier past in order to understand or express their iron age presence in this way the contributions examine perspectives that are of wider relevance for related themes in different periods

Diachronic Settlement Studies in the Metal Ages 2003

archaeological settlement studies are called diachronic when they deal with chronological development local or regional over time the articles in this book

remain within the bronze age for the most part and cover periods that vary from a few hundred to thousands of years the contributions represent three traditions in european diachronic settlement studies a northern a central european and a south european the aim of this european science foundation esf workshop from which these reports emanated was to present studies from a wide range of european countries in order to illustrate the different scientific approaches to common problems by doing this the participants examined how different research traditions administrative practices and financial restrictions influence archaeological practices they then search for new common approaches the collection of reports cover archaeological studies from scandinavia northern germany poland slovakia slovenia and england

Promotion of Work Ability towards Productive Aging 2008-12-02

the social context of technology explores non ferrous metalworking in britain and ireland during the bronze and iron ages c 2500 bc to 1st century ad bronze working dominates the evidence though the crafting of other non ferrous metals including gold silver tin and lead is also considered metalwork has long played a central role in accounts of european later prehistory metals were important for making functional tools and elaborate decorated objects that were symbols of prestige metalwork could be treated in special or ritualised ways by being accumulated in large hoards or placed in rivers or bogs but who made these objects prehistoric smiths have been portrayed by some as prosaic technicians and by others as mystical figures akin to magicians they have been seen both as independent travelling entrepreneurs and as the dependents of elite patrons hitherto these competing models have not been tested through a comprehensive assessment of the archaeological evidence for metalworking this volume fills that gap with analysis focused on metalworking tools and waste such as crucibles moulds casting debris and smithing implements the find contexts of these objects are examined both to identify places where metalworking occurred and to investigate the cultural practices behind the deposition of metalworking debris the key questions are what was the social context of this craft and what was its ideological significance how did this vary regionally and change over time as well as elucidating a key aspect of later prehistoric life in britain and ireland this important examination by leading scholars contributes to broader debates on material culture and the social role of craft

The Social Context of Technology 2020-06-30

in re writing history dennis harding addresses contemporary concerns about information and its interpretation his focus is on the archaeology of prehistoric and early historic britain and the transformation over two centuries and more in the interpretation of the archaeological heritage by changes in the prevailing political social and intellectual climate far from being topics of concern only to academics the way in which seemingly innocuous issues such as cultural diffusion or social reconstruction in the remote past are studied and presented reflects important shifts in contemporary thinking that challenge long accepted

conventions of free speech and debate some issues are highly controversial such as the proposals for the stonehenge world heritage sites others challenge long held popular myths like the deconstruction of the celts and by extension the picts some traditional tenets of scholarship have yet remained unchallenged such as the classical definition of civilization itself why should it matter are the shifting attitudes of successive generations not symptomatic of healthy and vibrant debate are there grounds for believing that current changes are of a more disquieting character denying the basic assumptions of rational argument and freedom of enquiry that have been the foundation of western scholarship since the enlightenment re writing history offers harding s personal evaluation of these issues which will resonate not only with practitioners and academics of archaeology but across a wide range of disciplines facing similar concerns

Rewriting History 2020-01-12

between 2018 and 2019 cornwall archaeological unit undertook two projects at mount s bay penwith the first involved the excavation of a bronze age barrow and the second environmental augur core sampling in marazion marsh both sites lie within an area of coastal hinterland which has been subject to incursions by rising sea levels since the mesolithic an area of approximately 1 kilometer in extent between the current shoreline and st michael s mount has been lost to gradually rising sea levels with current climate change this process is likely to occur at an increasing rate given their proximity the opportunity was taken to draw the results from the two projects together along with all available existing environmental data from the area for the first time the results from all previous palaeoenvironmental projects in the mount s bay area have been brought together evidence for coastal change and sea level rise is discussed and a model for the drowning landscape presented in addition to modeling the loss of land and describing the environment over time social responses including the wider context of the bronze age barrow and later bronze age metalwork deposition in the mount s bay environs are considered the effects of the gradual loss of land are discussed in terms of how change is perceived its effects on community resilience and the construction of social memory and narratives of place the volume presents the potential for nationally significant environmental data to survive which demonstrates the long term effects of climate change and rising sea levels and peoples responses to these over time

2022 is the centenary both of the founding of the irish state and the publication of james joyce s ulysses in this book which describes a more radical edge than previous treatments of joyce luke gibbons counters much of the joyce and modernism scholarship while challenging popular historical accounts of events from 1913 to 1923 he takes up two widely held notions first that joyce and his writerly contemporaries were set apart from events in ireland of the period especially during the writing of ulysses and second that joyce was not appreciated in his native ireland at the time and only came to widespread notice as he was embraced by non irish critics much later in the century during the 1980s and 90s in contrast gibbons here shows multiple points of intersection between the modernist avant garde and figures and events in the irish revolution as gibbons suggests the ireland of joyce and ulysses was the same culture that produced the easter rising and the irish revolution how is it he asks that societies not yet modern are able to produce breakthrough works in modernism gibbons here redefines the easter rising as a modern event not a belated resurgent mythic gesture of a bygone romantic ireland by reconceiving the revolution as modern not as the revival of celtic pride as earlier studies claim gibbons is able to connect joyce to other forward facing projects to yeats s radically conceived abbey theater for example or the victorian gael of standish o grady and the insular catholic nationalism movement he also places joyce in a wider modernist community of artists and thinkers including bertolt brecht ernst bloch alfred döblin and hermann broch and beyond europe to writers in america among them f scott fitzgerald marianne moore h l mencken w e b du bois and claude mackay thus gibbons recasts what has gone before in a new unexpected light placing ulysses and the irish revolution not at the end of a process or an irish renaissance but at the beginning of global decolonization a new way of understanding irish history at the turn of the century and joyce in the context of world literature the book will be read and contested by scholars of modern irish history and the

Stone in Metal Ages *2020-07-30*

this book is an exploration of the new idea that the celtic languages originated in the atlantic zone during the bronze age approached from various perspectives pro and con archaeology genetics and philology this celtic atlantic bronze age theory represents a major departure from the long established but increasingly problematical scenario in which the story of the ancient celtic languages and that of peoples called keltóí celts are closely bound up with the archaeology of the hallstatt and la tène cultures of iron age west central europe the celtic from the west proposal was first presented in barry cunliffe s facing the ocean 2001 and has subsequently found resonance amongst geneticists it provoked controversy on the part of some linguists though is significantly in accord with john koch s findings in tartessian 2009 the present collection is intended to pursue the question further in order to determine whether this earlier and more westerly starting point might now be developed as a more robust foundation for celtic studies as well as having this specific aim a more general purpose of celtic from the west is to bring to an english language readership some of the rapidly unfolding and too often neglected evidence of the pre roman peoples and languages of the western iberian peninsula celtic from the west is an outgrowth of a multidisciplinary conference held at the national library of wales in aberystwyth in december 2008 as well as the 11 chapters the book includes 45 distribution maps and a further 80 illustrations the conference and collaborative volume mark the launch of a multi year research initiative undertaken by the university of wales centre for advanced welsh and celtic studies cawcs ancient britain and the atlantic zone abraço contributors archaeology barry cunliffe raimund karl amílcar guerra genetics brian mcevoy daniel bradley stephen oppenheimer ellen rrvik language literature graham isaac david parsons john t koch philip freeman dagmar s wodtko
