Mobile Telecommunications in a High-Speed World 2012-08-28 mobile telecommunications in a high speed world tells the story of 3g and higher speed mobile communication technologies over ten years have passed since the first third generation 3g licences were awarded following debates about the merits of auctions versus beauty contests then nothing much happened more licences were issued a few roll outs commenced and everyone began to think it had all been a horribly expensive mistake that may still turn out to be the case but in the meantime there have been massive developments in terms of the number of licences and launches worldwide in the range of services that can be accessed in the range of devices that can be used to access them in operator strategies etc even the technology has improved considerably with 4g now under discussion much of this story has been chronicled largely on the internet but the information is in tens of thousands of bits and pieces and a large part of it is either misleading or just plain wrong here peter curwen and jason whalley introduce the outcomes of research that has involved the compilation of a unique database which details every licence and launch worldwide involving 3g the authors discuss the structure of the industry and the strategic behaviour of operators as well as the social consequences of the spread of 3g they examine the role of new entry upon competition and present analysis of the main operators involved the development of handsets and especially smartphones a number of country case studies are included this comprehensive and up to date volume includes a number of country studies and is written by two of the world s foremost researchers on this industry mobile telecommunications in a high speed world will serve the needs of students academics and those involved or contemplating involvement with the telecoms industry why pay thousands of dollars to consultancies to separate the wheat from the chaff with respect to 3g when you can read this book

Protocols for High-Speed Networks VI 2013-03-14 over the past decade china has built 25 000 km of dedicated highspeed railway more than the rest of the world combined what can we learn from this remarkable experience china's high speed rail development examines the chinese experience to draw lessons for countries considering investing in high speed rail the report scrutinizes the planning and delivery mechanisms that enabled the rapid construction of the high speed rail system it highlights the role of long term planning consistent plan execution and a joint venture structure that ensures active participation of provincial and local governments in project planning and financing traffic on china's high speed trains has grown to 1.7 billion passengers a year the study examines the characteristics of the markets for which high speed rail is competitive in china it discusses the pricing and service design considerations that go into making high speed rail services competitive with other modes and factors such as good urban connectivity that make the service attractive to customers one of the most remarkable aspects of the chinese experience is the rapid pace of high quality construction the report looks at the role of strong capacity development within and cooperation among china railway corporation rail manufacturers universities research institutions laboratories and engineering centers that allowed for rapid technological advancement and localization of technology it describes the project delivery structures and incentives for delivering quality and timely results finally the report analyzes the financial and economic sustainability of the investment in high speed rail it finds that a developing country can price high speed rail services affordably and still achieve financial viability but this requires very high passenger density economic viability similarly depends on high passenger density

Report of Investigations 1959 the railway research institute instytut kolejnictwa in warsaw was established in 1951 and was until 2000 part of the polish state railways pkp at present it serves as an independent entity it is subordinated to the minister responsible for transport since its inception the institute has been the centre of competence for technology technique and organization of operation and services in rail transport particularly in respect to innovation one of its fundamental tasks also includes activities connected with safety which are carried out in close cooperation with the national safety authority i.e. the office of rail transport at the same time the institute participated in the process of upgrading and modernization of the rail network in poland experience in high speed rail gained as a result of international cooperation and basing on the effort to increase speed on railway lines in poland so far 200 km/h is included in the monograph *koleje dużych prędkości w polsce* high speed rail in poland published in 2015 for the benefit of the polish reader this monograph aims at reaching an international audience of experts so as to present polish determinants of hsr implementation in order to elaborate this monograph apart from specialists from the railway research institute experts from other research and academic centres were invited not only presenting a wide range of problems connected with future

construction of high speed lines in polish conditions but also a number of operational ones the authors have created a reference work of universal character solving problems in order to build and operate high speed rail systems in countries on a similar level of development as poland features providing requirements for design and upgrade of engineering works on high speed rail development information on restructuring and building railway lines for countries starting to develop a high speed rail system dealing with organizational engineering socioeconomic and economic demands for transport services and the formation of human resources for constructing and operting a high speed rails system presenting these problems on the international arena will facilitate future cooperation and application of world experience to create hsr in poland and integrate the polish hsr network into the international one
