in early 2009 many economists financiers and media pundits were confidently predicting the end of the american led capitalism that has shaped history and economics for the past 100 years yet the u s economic model far from being discredited may be strengthened by the financial crisis in this provocative book anatole kaletsky re interprets the financial crisis as part of an evolutionary process inherent to the nature of democratic capitalism capitalism he argues is resilient its first form capitalism 1.0 was the classical laissez faire capitalism that lasted from 1776 until 1930 next was capitalism 2.0 new deal keynesian social capitalism created in the 1930s and extinguished in the 1970s its last mutation reagan thatcher market fundamentalism culminated in the financially dominated globalization of the past decade and triggered the recession of 2009 10 the self destruction of capitalism 3.0 leaves the field open for the next phase of capitalisms evolution capitalism is likely to transform in the coming decades into something different both from the totally deregulated market fundamentalism of reagan thatcher and from the roosevelt kennedy era this is capitalism 4.0

macroeconomic policy is one of the most important policy domains and the tools of macroeconomics are among the most valuable for policy makers yet there has been up to now a wide gulf between the level at which macroeconomics is taught at the undergraduate level and the level at which it is practiced at the same time doctoral level textbooks are usually not targeted at a policy audience making advanced macroeconomics less accessible to current and aspiring practitioners this book born out of the masters course the authors taught for many years at the harvard kennedy school fills this gap it introduces the tools of dynamic optimization in the context of economic growth and then applies them to a wide range of policy questions ranging from pensions consumption investment and finance to the most recent developments in fiscal and monetary policy it does so with the requisite rigor but also with a light touch and an unyielding focus on their application to policy making as befits the authors own practical experience advanced macroeconomics an easy guide is bound to become a great resource for graduate and advanced undergraduate students and practitioners alike

bachelor thesis from the year 2018 in the subject economics economic cycle and growth grade 10 00 babeş bolyai universit language english abstract although romania is considered one of the fastest growing economies with favourable prospects for the future the country is lagging far behind other european countries on issues such as the quality of healthcare and education systems levels of corruption macroeconomic stability and environmental safety the aim of this thesis is to provide an ensemble view of the factors that actually determine how advanced a country is by analysing the main development theories provided in the literature and determining their significance in romania s past and present context this is done by first presenting each theory in detail to ensure an understanding of the various dimensions and factors that should be taken into account in the assessment of any nation s level of development followed by an examination tailored specifically to romania s context of the four domains of sustainable development economics politics society culture and ecology through the consolidation of relevant statistical data and bibliographical information the findings of the paper highlight the fact that romania s overall development is not equivalent to its economic growth as the latter does not necessarily reflect the population s welfare for the country to be considered advanced from other points of view as well authorities should not fail to recognize that attracting and retaining foreign investment encouraging entrepreneurship increasing the national budgets for education health care and infrastructure improvement tackling the serious ongoing problem of corruption and lack of institutional transparency and strengthening environmental awareness and independence are all factors that have an important role in defining romania s current level of development and in providing future generations with further opportunities

why we need to think more like economists to successfully combat terrorism if we are to correctly assess the root causes of terrorism and successfully address the threat we must think more like economists do alan krueger s what makes a terrorist explains why our tactics in the fight against terrorism must be based on more than anecdote intuition and speculation many popular ideas about terrorists are fueled by falsehoods misinformation and fearmongering many believe that poverty and lack of education breed terrorism despite a wealth of evidence showing that most terrorists come from middle class and often college educated backgrounds krueger closely examines the factors that motivate individuals to participate in terrorism drawing

inferences from terrorists own backgrounds and the economic social religious and political environments in the societies from which they come he describes which countries are the most likely breeding grounds for terrorists and which ones are most likely to be their targets krueger addresses the economic and psychological consequences of terrorism and puts the threat squarely into perspective revealing how our nation s sizable economy is diverse and resilient enough to withstand the comparatively limited effects of most terrorist strikes he also calls on the media to be more responsible in reporting on terrorism bringing needed clarity to one of the greatest challenges of our generation this 10th anniversary edition of what makes a terrorist features a new introduction by the author that discusses the lessons learned in the past decade from the rise of isis and events like the 2016 pulse nightclub attack in orlando florida

the current paradigm of forest economics is based on faustmann formulation ff of land expectation value proposed by martin faustmann it was a great achievement by a forester to propose a formulation that captures some fundamental economic features of capital theory which however the followers of the ff approach have trapped themselves into the past and have not shown any indication of economic acumen of the great faustmann this has resulted in a common problem in the current paradigm of forest economics known as faustmann forest resource economics ffre to prescribe the application of a single ff approach to all situations irrespective of the specific features of the situation the current state of forest economics is similar to that of

neoclassical economics and is full of inefficiencies in neoclassical economics inefficiencies are due to its locked in position in rational economic man while in forest economics inefficiencies are due to its locked in position in the ff the focus of this volume is on the new paradigm of forest economics termed as post faustmann forest resource economics pffre the first chapter lays the foundation of the pffre and presents the key distinctions between the ffre and the pffre the volume includes twelve other chapters that address issues related to forest economics from perspectives different than the ffre chapter 2 to 6 are focused on issues related to human behavior that is different than the rational economic man chapter 7 and 8 on public choice theory chapter 9 and 10 on systems approaches and chapter 11 to 13 on incremental approaches to incorporate new features in the ffre
