Hate Crimes 2017-03-31 the fourth edition of hate crimes causes controls and controversies by phyllis b gerstenfeld takes a multidisciplinary approach that allows students to explore a broad scope of hate crimes drawing on recent developments topics and current research this book examines the issues that foster hate crimes while demonstrating how these criminal acts impact individuals as well as communities students are introduced to the issue through first person vignettes offering a more personalized account of both victims and perpetrators of hate crimes packed with the latest court cases research and statistics from a variety of scholarly sources the fourth edition is one of the most comprehensive and accessible textbooks in the field

Taste and Odour in Source and Drinking Water 2016 this book provides an updated evaluation of the characterization and management of taste and odour t o in source and drinking waters authored by international experts from the iwa specialist group on off flavours in the aquatic environment the book represents an important resource that synthesizes current knowledge on the origins mitigation and management of aquatic t o problems the material provides new knowledge for an increasing widespread degradation of source waters and global demand for high quality potable water key topics include early warning detection and source tracking chemical sensory and molecular diagnosis treatment options for common odorants and minerals source management modelling and risk assessment and future research directions taste and odour in source and drinking water is directed towards a wide readership of scientists engineers technical operators and managers and presents both practical and theoretical material including an updated version

of the benchmark drinking water taste and odour wheel and a new biological wheel to provide a practical and informative tool for the initial diagnosis of the chemical and biological sources of aquatic t o

The Causes, Controls, and Organization of Behavior in the Neonate 1966 water pollution causes effects and control is a book providing comprehensive information on the fundamentals and latest developments in the field of water pollution the book is divided into 28 chapters covering almost all the aspect of water pollution including water resources and general properties of water history of water pollution and legislation origin sources and effects of pollutants bioaccumulation and biomagnification toxicity testing and interaction of toxicities in combination water quality standards biomonitoring of water pollution bacteriological examination and purification of drinking water monitoring and control of pollution in lakes rivers estuaries and coastal waters physical and biological structure of aquatic systems and structure properties and uses of water some important topics like eutrophication organic pollution oil pollution and thermal pollution have been discussed in detail the water pollution caused by pesticides heavy metals radio nuclides and toxic organics and inorganic along with the water quality problems associated with water borne pathogens and nuisance algae have also been dealt with extensively the book covers in detail the flow measurement and characterization of waste waters in industries and control of water pollution by employing various techniques for treatment of biological and nonbiological wastes the considerations for recycling and utilization of waste waters have also found a place in the book special topic has also been given on water pollution scenario and water related policies and programmes in india the book shall be of immediate interest to the students of environmental science life science and social sciences both at undergraduate and postgraduate levels people from a wide variety of other disciplines like civil chemical and environmental engineering pollution control authorities industries and practicing engineers consultants and researchers will also find the book of great interest

Taste and Odour in Source and Drinking Water 2018-03-15 water pollution is a major problem faced by our world the pollutants are discharged directly or indirectly into the water bodies some of the ways of preventing or treating water pollution are sewage treatment industrial wastewater treatment point source wastewater treatment etc this book includes some of the vital pieces of work being conducted across the world on various topics related to water pollution its control and treatments it aims to serve as a resource guide for students and experts alike

Water Pollution 2006 international terrorism is an anthology of 28 readings by acknowledged experts focuses on the characteristics causes and the control of international terrorism the book presents a balance of contending current perspectives and theories blending both descriptive and interpretative commentary to provide a stimulating and thought provoking background to an explosive issue that has captured the attention of the international community

Water Pollution: Causes, Control and Treatment 2018-02-12 pollution causes effects and control is the fourth edition of a best selling introductory level book dealing with chemical and radioactive pollution in its broadest sense the scope of the book ranges from the sources of pollutants and their environmental behaviour to their effects on human and non human receptors to the technologies and strategies available for control the fourth edition has been wholly revised and updated from the previous edition due to the rapid pace of

developments in this field topics covered include chemical pollution of freshwater and marine environments drinking water quality water pollution biology sewage and its treatment toxic wastes air pollution and atmospheric chemistry control of pollutant emissions land contamination solid waste management clean technologies persistent organic pollutants in the environment environmental radioactivity health effects of environmental chemicals legal control of pollution and integrated pollution control there is a completely new chapter on clean technologies and industrial ecology reflecting the growing importance of pollution prevention as opposed to end of pipe solutions whilst originally intended as an introductory reference work for professionals within the field the book has been widely adopted for teaching purposes at the undergraduate and postgraduate level

Pollution 5th Edition 1969 this book reviews the current concepts in biofilm formation and its implications in human health and disease the initial chapters introduce the mechanisms of biofilm formation and its composition subsequently the chapters discuss the role of biofilm in acute and chronic infections it also explores the pivotal role of both innate and adaptive immunity on the course of biofilm infection in addition the book elucidates the bacterial biofilm formation on implantable devices and the current approaches to its treatment and prevention it analyzes the possible relationship between antimicrobial resistance and biofilm formation finally the book also summarizes the current state of the art therapeutic approaches for preventing and treating biofilms this book is a useful resource for researchers in the field of microbiology clinical microbiology and also medical practitioners

Air Pollution Emergencies, Causes, Controls and Consequences 1990-01-01 now in its sixth edition juvenile delinquency causes and control offers a clear and concise overview of the latest theories and research on the causes and control of delinquency the text is organized around three major questions in the field what is the nature and extent of delinquency what are the causes of delinquency and what strategies should we employ to control delinquency these thought provoking questions draw students into the text challenging them to use major theories to explain the basic facts about delinquency to understand the research on its causes and to develop and evaluate programs and policies for its control

International Terrorism 2007-10-31 causes and control of colorectal cancer a model for cancer prevention is a ground breaking monograph which takes a global multidisciplinary approach to the causes carcinogenesis and control of colorectal cancer over 1000 key studies were analyzed on colorectal cancer cause carcinogenesis primary prevention early detection using modern screening techniques and surveillance after tumor excision all major research results are included up to the date of publication the key chapters include those on morphology molecular biology and evolution of tumors etiology chapters on heredity diet alcohol smoking physical activity life stress and others while major chapters in the area of colorectal cancer control are on primary prevention early detection by screening and surveillance and post tumor excision surveillance important recommendations on primary prevention screening and surveillance of colorectal tumors are made in keeping with the most current research data causes and control of colorectal cancer a model for cancer prevention takes colorectal cancer control into the 21st century and suggests this to be the first cancer in which control will be largely achieved within the next generation as a result of the unprecedented multidisciplinary research into causation primary prevention screening and surveillance over the past 30 years the book also serves as a model for the control of other common malignancies

particularly cancers of the breast and prostate the causes and prevention of which are less well understood

Pollution 2001 offers insights into the nature of decay processes and the factors that control them this book covers the mapping of facades to explain rates of decay associated with conservation actions the laboratory simulation of corrosion in polluted atmospheres the quantification of colour change through a study of the artificial ageing of building stone

Environmental Pollution 1965 this book is a volume in the penn press anniversary collection to mark its 125th anniversary in 2015 the university of pennsylvania press rereleased more than 1 100 titles from penn press s distinguished backlist from 1899 1999 that had fallen out of print spanning an entire century the anniversary collection offers peer reviewed scholarship in a wide range of subject areas

Causes, Control, and Prevention of Gullies at Various New England Locations 2002 eutrophication continues to be a major global challenge to water quality scientists the global demand on water resources due to population increases economic development and emerging energy development schemes has created new environmental challenges to global sustainability eutrophication causes

consequences and control provides a current account of many important aspects of the processes of natural and accelerated eutrophication in major aquatic ecosystems around the world the connections between accelerated eutrophication and climate change chemical contamination of surface waters and major environmental and ecological impacts on aquatic ecosystems are discussed water

quality changes typical of eutrophication events in major climate zones including temperate tropical subtropical and arid regions are included along with current approaches to treat and control increased eutrophication around the world the book provides many useful new insights to address the challenges of global increases in eutrophication and the increasing threats to biodiversity and water quality

Sediment Flux to Basins 1973 offering the first empirically driven assessment of the development marketisation regulation and use of online gambling organisations and their products this book explores the relationship between online gambling and crime it draws upon quantitative and qualitative data including textual and visual analyses of e gambling advertising and the records of player protection and

standards organisations together with a virtual ethnography of online gambling subcultures to examine the ways in which gambling and crime have been approached in practice by gamers regulatory agencies and online gambling organisations building upon contemporary criminological theory it develops an understanding of online gambling as an arena in which risks and rewards are carefully constructed

and through which players navigate employing their own agency to engage with the very real possibility of victimisation with attention to the manner in which online gambling can be a source of criminal activity not only on the part of players but also criminal entrepreneurs and legitimate gambling businesses online gambling and crime discusses developments in criminal law and regulatory frameworks

evaluating past and present policy on online gambling a rich examination of the prevalence incidence and experience of a range of criminal activities linked to gambling on the internet this book will appeal to scholars and policy makers in the fields of sociology and criminology law the study of culture and subculture risk health studies and social policy

Polluted Groundwater 1973 in this update of the 1996 edition harrison u of birmingham uk and the other uk contributors to 21 chapters keep pace with developments in relevant fields additions include a chapter on clean technologies and industrial ecology discussion of microbiological contamination and chemical pollution of water and greater emphasis on local air quality management spurred by the uk

national air quality strategy 1997 illustrations include color satellite maps of pollutants first published in 1983 as a reference for professionals but also useful as a college text price is converted from 35 pounds sterling c book news inc

Polluted Groundwater 1971 zoonoses are infectious diseases that can be transmitted from animals both wild and domestic to humans a significant number of emerging and re emerging waterborne zoonotic pathogens have been recognised over recent decades such as sars e coli campylobacter and cryptosporidium this publication assesses current knowledge about waterborne zoonoses and identifies strategies and research needs for anticipating and controlling future emerging water related diseases in order to better protect the health of both humans and animals it is based on the discussions of a workshop held in the united states in september 2003 which included 29 experts from 14 countries and diverse disciplines including microbiology water epidemiology medicine sanitary engineering food safety and regulatory policy

Social problems: causes and controls 2021-05-05 maintaining the microbial quality in distribution systems and connected installations remains a challenge for the water supply companies all over the world despite many years of research this book identifies the main concerns and knowledge gaps related to regrowth and stimulates cooperation in future research microbial growth in drinking water supplies provides an overview of the regrowth issue in different countries and the water quality problems related to regrowth the book assesses the causes of regrowth in drinking water and the prevention of regrowth by water treatment and distribution editors dirk van der kooij and paul w j j van der wielen kwr watercycle research institute the netherlands

POLLUTED GROUNDWATER: SOME CAUSES, EFFECTS, CONTROLS, AND MONITORING. 2017-11-02 we tend to believe we have agency over our bodies our minds and even our deaths yet emerging science challenges our assumptions of mastery at the microscopic level the cells in our bodies facilitate tumours and attack other cells with life threatening consequences in this revelatory book barbara ehrenreich argues that our bodies are a battleground over which we have little control and lays bare the cultural charades that shield us from this knowledge challenging everything we think we know about life and death she also offers hope that we find our place in a natural world teeming with animation and endless possibility

Biofilm-Mediated Diseases: Causes and Controls 2012-12-06 at the time of writing the topic of lead pollution is the subject of an intense and sometimes heated debate the argument centres upon possible adverse health effects arising from exposure of children to current environmental levels of lead such arguments now appear little closer to resolution than they did five years ago although the development of ever more sophisticated biochemical and epidemiological techniques may eventually provide an answer over the past five to ten years as the general public has become aware of the lead issue pressure has been put upon governments to limit emissions of lead and hence limit or reduce the exposure of the population to the metal govern ments and governmental agencies have responded in several ways varying between those who prefer to take little or no action on the basis that they see no cause for concern and those who have taken firm action after concluding that the scientific and medical evidence warrants this approach any effective control strategy for lead requires knowledge of the sources of environmental exposure and an understanding of the pathways of this metal in the environment this book aims to provide such information and to explain the methods available for limiting emissions of lead from the most important

sources to put this information in context a chapter on the routes of human exposure to lead and the health effects is included
