Nature-Based Solutions to Climate Change Adaptation in Urban Areas 2017-09-01 this open access book brings together research findings and experiences from science policy and practice to highlight and debate the importance of nature based solutions to climate change adaptation in urban areas emphasis is given to the potential of nature based approaches to create multiple benefits for society the expert contributions present recommendations for creating synergies between ongoing policy processes scientific programmes and practical implementation of climate change and nature conservation measures in global urban areas except where otherwise noted this book is licensed under a creative commons attribution 4 0 international license to view a copy of this license visit creativecommons.org/licenses/by/4.0/

Urbanization in Ghana. Challenges and Prospects for National Development 2021-05-29 cities are not only home to around half of the global population but also major centers of economic activity and innovation yet so far there has been no consensus of what a city really is substantial differences in the way cities metropolitan urban and rural areas are defined across countries hinder robust international comparisons and an accurate monitoring of sdgs the report cities in the world a new perspective on urbanisation addresses this void and provides new insights on urbanisation by applying for the first time two new definitions of human settlements to the entire globe the degree of urbanisation and the functional urban area

OECD Urban Studies Cities in the World A New Perspective on Urbanisation 2020-06-16 this book provides a unique synthesis of concepts and tools to examine natural resource socio economic legal policy and institutional issues that are important for managing urban growth into the future the book will particularly help the reader to understand the current issues and challenges and develop strategies and practices to cope with future pressures of urbanisation and peri urban land water and energy use challenges in particular the book will help the reader to discover underlying principles for the planning of future cities and peri urban regions in relation to i balanced urban development policies and institutions for future cities ii understanding the effects of land use change population increase and water demand on the liveability of cities iii long term planning needs and transdisciplinary approaches to ensure the secured future for generations ahead and iv strategies to adapt the cities and land water and energy uses for viable and liveable cities there are growing concerns about water food security and sustainability with increased urbanisation worldwide for cities to be liveable and sustainable into the future there is a need to maintain the natural resource base and the ecosystem services in the peri urban areas surrounding cities this need is increasing under the looming spectre of global warming and climate change this book will be of interest to policy makers urban planners researchers post graduate students in urban planning environmental and water resources management and managers in municipal councils

Balanced Urban Development: Options and Strategies for Liveable Cities 2016-08-29 diverse driving forces processes and actors are responsible for different trends in the development of megacities and large urban areas under the dynamics of global change megacities are themselves changing on the one hand they are prone to increasing socio economic vulnerability due to pronounced poverty socio spatial and political fragmentation sometimes with extreme forms of segregation disparities and conflicts on the other hand megacities offer positive potential for global transformation e g minimisation of space

consumption highly effective use of resources efficient disaster prevention and health care options if good strategies were developed at present in many megacities and urban areas of the developing world and the emerging economies the quality of life is eroding most of the megacities have grown to unprecedented size and the pace of urbanisation has far exceeded the growth of the necessary infrastructure and services as a result an increasing number of urban dwellers are left without access to basic amenities like clean drinking water fresh air and safe food additionally social inequalities lead to subsequent and significant intra urban health inequalities and unbalanced disease burdens that can trigger conflict and violence between subpopulations the guiding idea of our book lies in a multi and interdisciplinary approach to the complex topic of megacities and urban health that can only be adequately understood when different disciplines share their knowledge and methodological tools to work together we hope that the book will allow readers to deepen their understanding of the complex dynamics of urban and megacity populations through the lens of public health geographical and other research perspectives

Health in Megacities and Urban Areas 2011-07-06 when first released much praise was given to this book an outstanding book on urban geography representative of the best on this subject higher education journal the book ought to be required reading for every planner and student of planning a magnificent achievement town and country planning the geography of towns provides a concise but thorough introduction to the important subject of urban geography it traces the development of urban areas from the earliest sites of nineveh aleppo and agade to modern megalopolises and strip cities and deals authoritatively with problems of classification and ranking location and type origins and course of development and the relationship of the city to its region and nation all facets of urban geography are covered including the core integuments population structure land use patterns enclaves and town structure population mobility and the continual crisscross circulation of populations within and between town and region are seen as important forces affecting the internal geography of towns the author questions the usefulness or validity of such terms as neighborhood and stresses the need for more meaningful conceptualizations and vocabulary one of the fundamental problems connected with urban geography is to assist in the planning of future cities this book contributes substantially to an understanding of the interrelations of town and region and to an understanding of the components of the city itself which are essential to intelligent planning for the future

The Geography of Towns 2017-07-12 africa s urban populations are growing rapidly raising numerous environmental concerns as the pace of change stretches local resources and generates hazardous and unhealthy living conditions because these urban areas are also linked to the extremes of both poverty

and wealth they offer a unique opportunity for analyzing the many aspects of environmental politics drawing on fieldwork data map analysis place name study interviews and fiction studies garth myers explores african environmentalism from a variety of perspectives by acknowledging the clash between western planning mindsets that focus on sustainable development and the lived realities of residents in often poor informal settlements this important book marks a critical advance in the study of africa s urban environments it will have a profound impact across disciplines from geography to urban development environmental and african studies

Urban Environments in Africa 2016-02-24 urban problems and their resolution represent one of the major challenges for planners and decision makers in the modern world this book first published in 1990 makes a major contribution to the field presenting an international and interdisciplinary approach to the challenges presented by the urban environment the coverage is comprehensive ranging from the economic and political dimensions of the capitalist system to the issues of poverty and deprivation and questions about housing equity this is an essential reference guide to social economic and environmental problems in urban areas which is of great value to students of planning urban studies geography and sociology

Urban Problems (Routledge Revivals) 2014-06-03 this groundbreaking new volume on social sustainability offers both critique and creative solutions it challenges the conventional wisdoms of social sustainability and presents practical examples of projects that will help practitioners to think carefully and innovatively about the situations they are addressing the book consists of original contributions from academics working in the fields of urban planning housing regeneration transport and international sustainable development drawing on case study research gathered in the uk europe and africa it adopts an original interdisciplinary approach to both theory and practice illustrating the challenges and opportunities facing policy makers and practitioners attempting to develop manage and maintain sustainable communities the authors argue that the dominant approach of how to do small scale social sustainability fails to locate it within broader social processes ignoring the context not only sustains but also actively reproduces wider inequalities the book presents a new more coherent and more complete approach to issues of social sustainability in urban areas the book approaches current urban policy discourses in three different ways represented by three sections firstly focusing on small places within the urban fabric secondly addressing the whole urban fabric by examining whether changing urban living and working patterns the third section explores some of the ways that funding can be secured to achieve the aims of social sustainability and the social planning associated with it

Social Sustainability in Urban Areas 2010 this book describes the urgent challenge faced by cities

worldwide to become resilient to climate change impacts this challenge goes further than the ability to resist the impacts of extreme weather conditions coping with climate impacts and the ability to recover from them are equally important as well as the capacity to adapt to the effects of climate change and the ability to transform the entire urban system the book explores how the resilience journey for coastal cities in particular encompasses using scientific knowledge but also the knowledge of citizens and practitioners measures and strategies on different scales are needed from national scale all the way down to neighbourhood street level and building level representing the holistic nature of climate resilience this collection contains unique insights from leading scientists and practitioners in areas of expertise such as engineering social sciences and urban design it will be a valuable resource for scholars students practitioners and policy makers interested in the development of resilient and sustainable urban environments

Roads in Urban Areas 1973 this comprehensive text focuses on the increasingly important issues of urban geochemical mapping with key coverage of the distribution and behaviour of chemicals and compounds in the urban environment clearly structured throughout the first part of the book covers general aspects of urban chemical mapping with an overview of current practice and reviews of different aspects of the component methodologies the second part includes case histories from different urban areas around europe authored by those national or academic institutions tasked with investigating the chemical environments of their major urban centers

Climate Resilient Urban Areas 2020-12-17 the majority of the world s population live in environments with artificially weakened wind as buildings in urban areas form wind breaks and reduce wind speeds anthropogenic heat is also generated and during the summer dense urban areas suffer from the urban heat island effect a known urban climate problem this book discusses how to evaluate the urban wind environment including ventilation performance and thermal comfort this book is organized in two parts wind environment and the urban environment and criteria for assessing breeze environments it includes chapters on sea breeze in urban areas thermal adaptation and the effect of wind on thermal comfort health risk of exposures pollutant transport in dense urban areas legal regulations for urban ventilation and new criteria for assessing the local wind environment keywords urban wind environments urban heat island urban climate land use change thermal comfort risk assessment urban air pollution urban ventilation

Mapping the Chemical Environment of Urban Areas 2011-02-11 both the number and percentage of people living in urban areas is growing rapidly up to half of the world s population is expected to be living

in a city by the end of the century and there are over 170 cities in the world with populations over a million cities have a huge impact on the local climate and require vast quantities of energy to keep them functioning the urban environment in turn has a big impact on the performance and needs of buildings the size scale and mechanism of these interactions is poorly understood and strategies to mitigate them are rarely implemented this is the first comprehensive book to address these questions it arises out of a programme of work polistudies carried out for the save programme of the european commission chapters describe not only the main problems encountered such as the heat island and canyon effects but also a range of design solutions that can be adopted both to improve the energy performance and indoor air quality of individual buildings and to look at aspects of urban design that can reduce these climatic effects the book concludes with some examples of innovative urban bioclimatic buildings the project was co ordinated by professor mat santamouris from the university of athens who is also the editor of the book other contributions are from the university of thessaloniki greece entpe lyons france and the university of stuttgart germany

Dispersion of Pollution in Urban Areas 2003 the purpose of this book is to examine urban forests in cities around the world it will ask questions about the history composition structure and management of trees in urban areas data for this book was collected in 33 cities across broad geographical areas known as biomes constraints and opportunities imposed on urban forest composition design and management by the ecological characteristics of these biomes will be examined the book will also address the cultural and historical factors that influenced the characteristics of urban forests around the world

Ventilating Cities 2012-02-23 cities today are more diverse than ever before economically socially culturally ethnically and in terms of people s identities and lifestyles highly diversified communities can be a source of new opportunities for socio economic development social mobility and advanced living standards for citizens and cities around the world however they can also create social and economic tensions that result in increasing poverty inequality segregation exclusion social polarization and insecurity in fact social cohesion and inclusion challenges are more intense and visible in cities than any other type of locality how can cities integrate diversity and enhance social cohesion among citizens can urban managers develop successful policies to combat poverty inequality and social exclusion while promoting social mobility and economic development can social economic and physical diversity in cities be a source of creativity innovation inclusiveness economic development and well being this volume is part of a book series called iese cities in motion international urban best practices cities and social cohesion focuses on the challenge of planning and creating more inclusive urban areas and provides a

review of the main trends and challenges of social cohesion in cities a compilation of international best practices on urban inclusion and more equitable urban development a resource and tool that can help city administrators and policymakers in their endeavor to develop policies initiatives and strategies to identify sustainable solutions to address the complex challenges of social cohesion in urban areas

Global framework for the response to malaria in urban areas 2022-10-31 this book examines the formation trajectory and development path of china s newly formed urban areas which was the result of an unprecedented massive urbanization process the analysis is based on the case of dezhou shandong province this book systematically introduces strategic studies planning and design development and construction investments policies and future development of new urban areas the book broadly summarizes strategies used for new urban area development and the concrete methods implemented in place in depth analysis into the selected case areas also reveal some critical issues emerged from the chinese practice in urbanization in general this book provides a useful reference for government leaders urbanization researchers city planners city economic policy makers and researchers interested in related areas

Energy and Climate in the Urban Built Environment 2013-06-17 futures for a declining city simulations for the cleveland area discusses the processes associated with decrease in urban population or urban decline and other measures of urban size or function this book describes the case study that analyzes what will happen to a declining metropolitan area and its central city if current trends on urban decline continue and how that outcome might be affected by various policies designed to counteract further loss this case study focuses on the cleveland standard metropolitan statistical area smsa and its central city cleveland the likely future course of urban decline acquired through quantitative estimates and methodologies for comparing policies is also covered in this text this publication is aimed primarily at economists urban planners and political scientists including those who formulate policies affecting declining urban areas

The World's Urban Forests 2017-02-07 first published in 2001 routledge is an imprint of taylor francis an informa company

Cities & Social Cohesion 2017-10-20 this book expands the current frame of reference of remote sensing and geographic information specialists to include an array of socio economic and related planning issues using remotely sensed data the project explores the efficacy and policy implications of new approaches toward analyzing data integrates approaches from human geography and explores the utility of employing geo technologies to further the politics of local growth and smart growth coalitions as in green space programs

The New Urban Area Development 2015-08-19 there is enormous interest in urban design and the regeneration of our urban areas but current thinking often concentrates on the built form forgetting the important role that open spaces play urban open spaces brings together extensive research and practical experience to prove the opportunities and benefits of different types of open space to society and individuals focusing on the importance of open spaces in daily urban life the book is divided into three sections the first section describes the social health environmental and economic benefits and opportunities that open spaces can provide the second section discusses the different types of urban open spaces that individuals or communities might use on a daily basis from private gardens to commercial squares and waterway corridors the final section provides best practice case studies demonstrating urban spaces being incorporated in new developments and community initiatives this is the first book to bring together a variety of evidence from different disciplines to outline the benefits and opportunities of urban open spaces in an accessible way not just for students and practitioners this book will be of value for anyone interested in the design development regeneration funding and use of open spaces in urban areas

Futures for a Declining City 2013-10-22 this book discusses urban microclimate and heat related risks in urban areas brought on by the combination of global climate change effects and local modification of climate determined by extensive urbanization such as the urban heat island phenomenon this matter is relevant to almost all urbanized areas in the world where the increase of urban population and air temperature is expected to endanger both the overall health of the population and the energy supply for the functioning of urban systems the book details the inter relationship between urban morphology microclimate and building energy performance and presents a multidisciplinary approach that brings together urban climatology engineering and architectural knowledge to support the development of reliable models and tools for research and practice this book is a useful tool for architects and building energy modelers urban planners and geographers who need a practical guide to realize basic urban microclimate simulation for use in both academic research and planning practice

Energy and Climate in the Urban Built Environment 2001 jan 24 hearing was held in baltimore md nov 23 and 24 hearings were held in los angeles calif

Geo-Spatial Technologies in Urban Environments 2007-05-11 this book qualitatively and quantitatively examines the relationships between the constructed environment health and social vulnerability it demonstrates that spatial disintegration is often intertwined with health and social inequalities and therefore a multidisciplinary approach to urban health is essential in order to analyze the impact that

psycho social environmental factors can have on objective and perceived health and to investigate the inequalities in healthcare and medical assistance processes empirical relationships have been observed between urban environment social vulnerability and health in different contexts however there is still a lack of standardized tools that allow us to gain a clear understanding of how health inequalities and daily life are generated in order to address this issue a national network of active research groups has been created to draft and develop a prototypical analysis infrastructure to facilitate empirical studies aimed at shedding light on the complex relationships between health disparities socio environmental and economic distress as well as personal and collective health given the interest in achieving meaningful fair and lasting solutions to health inequalities and the current lack of an analytical system there is the need for new multidisciplinary approaches oriented toward the quality of life within a eco social model of health providing an overview of the methodological approaches discussed this book will appeal to researchers at the same time it allows those working in local and government social care healthcare and administrative institutions to gain insights into best practices in urban contexts

Urban Open Spaces 2016-09-01 between 1930 and 2030 the world s population will have flipped from 70 rural to 70 urban while much has been written about the impacts of climate change and mitigation of its effects on individual buildings or infrastructure this book is one of the first to focus on the resilience of whole cities it covers a broad range of area wide disaster level impacts including drought heatwaves flooding storms and air quality which many of our cities are ill adapted to cope with and unless we can increase the resilience of our urban areas then much of our current building stock may become uninhabitable

Community Development in Urban and Semi-Urban Areas 1962 a book aiming to give an overview of the vagaries of urban policy in britain specifying both successful and unsuccessful projects it outlines alternative urban futures and suggests the directions in which policy should move to create the conditions for a revived future for large cities in britain

Community Development in Urban Areas 1961 this study uses satellite imagery and population data for the decade 2000 to 2010 in order to map urban areas and populations across the entire east asia region identifying 869 urban areas with populations over 100 000 allowing us for the first time to understand patterns in urbanization in east asia
