Fennema's Food Chemistry

2000-12-05

this latest edition of the most internationally respected reference in food chemistry for more than 30 years fennema s food chemistry 5th edition once again meets and surpasses the standards of quality and comprehensive information set by its predecessors all chapters reflect recent scientific advances and where appropriate have expanded and evolved their focus to provide readers with the current state of the science of chemistry for the food industry this edition introduces new editors and contributors who are recognized experts in their fields the fifth edition presents a completely rewritten chapter on water and ice written in an easy to understand manner suitable for professionals as well as undergraduates in addition ten former chapters have been completely revised and updated two of which receive extensive attention in the new edition including carbohydrates chapter 3 which has been expanded to include a section on maillard reaction and dispersed systems basic considerations chapter 7 which includes thermodynamic incompatibility phase separation concepts retaining the straightforward organization and accessibility of the original this edition begins with an examination of major food components such as water carbohydrates lipids proteins and enzymes the second section looks at minor food components including vitamins and minerals colorants flavors and additives the final section considers food systems by reviewing basic considerations as well as specific information on the characteristics of milk the postmortem physiology of edible muscle and postharvest physiology of plant tissues
