National 5 Computing Science 2015/16 SQA Past and Hodder Gibson Model Papers 2015-09-25

a research project to investigate the design and construction of reliable computing systems was initiated by b randell at the university of newcastle upon tyne in 1972 in over ten years of research on system reliability a substantial number of papers have been produced by the members of this project these papers have appeared in a variety of journals and conference proceedings and it is hoped that this book will prove to be a convenient reference volume for research workers active in this important area in selecting papers published by past and present members of this project i have used the following criteria a paper is selected if it is concerned with fault tolerance and is not a review paper and was published before 1983 i have used these criteria with only one or two exceptions in order to present a collection of papers with a common theme and at the same time to limit the size of the book to a reasonable length the papers have been grouped into seven chapters the first chapter introduces fundamental concepts of fault tolerance and ends with the earliest newcastle paper on reliability the project perhaps became well known after the invention of recovery blocks a simple yet effective means of incorporating fault tolerance in software the second chapter contains papers on recovery blocks starting with the paper which first introduced the concept
