a choice outstanding academic title 2005 this is a wonderful and entertaining book the title reflects the authors desire that their work be considered a primer for the curious adult i cannot think of any chemistry book i have read that has been more successful than this one in meeting such an ambitious goal extremely well written the tone and pacing are reader friendly this would be a great book club selection would also be a great book for the chemistry teacher at the high school level or

introductory college level i give the book my strongest recommendation journal of chemical education think of this as a chemistry education condensed into a single book a lightning tour of the field for the uninitiated publishers weekly the discussions presented are well written and accurate it would be a useful supplemental text for an introductory high school or college chemistry course the lab demonstrations alone would be an excellent resource for the junior high or high school science teacher science books films if chemistry was never your cup of tea you ll become a convert with the joy of chemistry with a simple set of grocery store chemicals and a good pair of safety goggles adults can rediscover the basics of chemistry while having fun even though it s not written for students this book s common sense safety advice and the sense of wonder that pervades every pages will inspire general science teachers to adapt many of these explorations for the classroom science scope for many chemistry is perceived as a burdensome affair weighed down with mathematics and restricted to well guarded research facilities while these facets of chemistry are certainly of paramount importance laboratories and calculators do not necessarily convey the inherent beauty of chemistry or the excitement of chemistry at work this book challenges the perception of chemistry as too difficult to bother with and too clinical to be any fun cathy cobb and monty l fetterolf both professional chemists and experienced educators introduce readers to the magic elegance and yes joy of chemistry from the fascination of fall foliage and fireworks to the functioning of smoke detectors and computers to the fundamentals of digestion as when good pizza goes bad the authors illustrate the concepts of chemistry in terms of everyday experience using familiar materials the authors begin with a bang a colorful bottle rocket assembled from common objects you find in the garage and then present the principles of chemistry using household chemicals and friendly nontechnical language they guide the reader through the basics of atomic structure the nature of molecular bonds and the vibrant universe of chemical reactions using analogy and example to illuminate essential concepts such as thermodynamics photochemistry electrochemistry and chemical equilibrium they explain the whys and wherefores of chemical reactions hands on demonstrations selected for their ease of execution and relevance illustrate basic principles and lively commentaries emphasize the fun and fascination of learning about chemistry this delightful and richly informative book amply proves that chemistry can appeal to our intuition logic and if we re willing to get down and dirty our sense of enjoyment too cathy cobb is the highly acclaimed author of magick mayhem and mavericks the spirited history of physical chemistry and with h goldwhite creations of fire chemistry s lively history from alchemy to the atomic age she is currently an instructor of calculus and physics at aiken preparatory school and an adjunct professor of chemistry at the university of south carolina at aiken monty l fetterolf is professor of chemistry at the university of south carolina at aiken

this report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke many surgeon general s reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies mechanisms of disease are important because they may provide plausibility which is one of the guideline criteria for assessing evidence on causation this report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke this evidence is relevant to understanding how smoking causes disease to identifying those who may be particularly susceptible and to assessing the potential risks of tobacco products

chemistry is widely considered to be the central science it encompasses concepts on which all other branches of science are developed yet for many students entering university gaining a firm grounding in chemistry is a real challenge chemistry3 responds to this challenge providing students with a full understanding of the fundamental principles of chemistry on which to build later studies uniquely amongst the introductory chemistry texts currently available chemistry3's author team brings together experts in each of organic inorganic and physical chemistry with specialists in chemistry education to provide balanced coverage of the fundamentals of chemistry in a way that students both enjoy and understand the result is a text that builds on what students know already from school and tackles their misunderstandings and misconceptions thereby providing a seamless transition from school to undergraduate study written with unrivalled clarity students are encouraged to engage with the text and appreciate the central role that chemistry plays in our lives through the unique use of real world context and photographs chemistry3 tackles head on two issues pervading chemistry education students mathematical skills and their ability to see the subject as a single unified discipline instead of avoiding the maths chemistry3 provides structured support in the form of careful explanations reminders of key mathematical concepts step by step calculations in worked examples and a maths toolkit to help students get to grips with the essential mathematical element of chemistry frequent cross references highlight the connections between each strand of chemistry and explain the relationship between the topics so students can develop an understanding of the subject as a whole digital formats and resources chemistry3 is available for students and institutions to purchase in a variety of formats and is supported by online resources the e book offers a mobile experience and convenient access along with functionality tools navigation features and links that offer extra learning support oxfordtextbooks.co.uk/ebooks the e book also features interactive animations of molecular structures screencasts in which authors talk step by step through selected examples and key reaction mechanisms and self assessment activities for each chapter the accompanying online resources will also include for students dt chapter 1 as an open access pdf dt chapter summaries and key equations to download to support revision dt worked solutions to the questions in the book the following online resources are also provided for lecturers dt test bank of ready made assessments for each chapter with which to test your students dt problem solving workshop activities for each chapter for you to use in class dt case studies showing how instructors are successfully using chemistry3 in digital learning environments and to support innovative teaching practices dt figures and tables from the book

millions of americans use e cigarettes despite their popularity little is known about their health effects some suggest that e cigarettes likely confer lower risk compared to combustible tobacco cigarettes because they do not expose users to toxicants produced through combustion proponents of e cigarette use also tout the potential benefits of e cigarettes as

devices that could help combustible tobacco cigarette smokers to quit and thereby reduce tobacco related health risks others are concerned about the exposure to potentially toxic substances contained in e cigarette emissions especially in individuals who have never used tobacco products such as youth and young adults given their relatively recent introduction there has been little time for a scientific body of evidence to develop on the health effects of e cigarettes public health consequences of e cigarettes reviews and critically assesses the state of the emerging evidence about e cigarettes and health this report makes recommendations for the improvement of this research and highlights gaps that are a priority for future research
