in depth study of the recall the most important popular device allowing voters to remove unresponsive elected officials from office the recall or election in reverse is meant to allow voters to remove an elected official from office prior to the completion of his her term in office in this revised second edition of the recall joseph f zimmerman examines the rise of the recall in the united states and its use by american voters proponents of the recall believe the threat of removal from office would ensure that elected officials would act in accord with the public s will while opponents fear their use would disrupt and inhibit public officers in the performance of their duties zimmerman provides a detailed analysis of how the recall has functioned in practice and discovers that the recall has seldom been employed against elected state officials although used more often against local government officials the rate is still not exceptionally high when one considers the extremely large number of elected officials after a century of use in the united states the recall has not produced a new era of public official responsibility as hoped for by proponents but neither has it caused extensive disruption of state and local governments the original concern of early opponents

recall biases in retrospective survey data are widely considered to be pervasive and have important implications for effective agricultural research in this paper we leverage the survey design literature and test three strategies to attenuate mental anchoring in retrospective data collection question order effects retrieval cues and aggregate community anchoring we embed a survey design experiment in a longitudinal survey of smallholder farmers in malawi and focus on anchoring bias in maize production and happiness exploiting differences between recalled and concurrent responses we find that asking for retrospective data before concurrent data reduces recall bias by approximately 34 for maize production a meaningful improvement with no increase in survey data collection costs retrieval cues are less successful in reducing the bias for maize reports and involve more data collection time while community anchors can exacerbate the bias reversing the order of questions and retrieval cues do not help to ease the bias for happiness reports

the government published a draft bill on the recall of mps with the aim of restoring faith in the political process after the expenses scandal but the restricted form of recall proposed could reduce public confidence in politics by creating expectations that are not fulfilled under the government s proposals constituents themselves would not be able to initiate a recall petition furthermore the circumstances that the government proposes would trigger a recall petition are so narrow that recall petitions would seldom if ever take place the committee believes that the new house of commons committee on standards which will include lay members already has the sanctions it needs to deal with mps who are guilty of misconduct including recommending the ultimate sanction of expulsion from the house of commons in cases of serious wrongdoing the committee argues that the option of expulsion must be actively considered and that the house must be prepared to act the committee recommends that the government replace the requirement for a single designated location for signing the recall petition with a requirement for multiple locations that people with an existing postal vote should automatically be sent a postal signature sheet in the event of a recall petition that constituents in northern ireland should have the same options for signing a recall petition as constituents elsewhere in the uk rather than being restricted to signing by post
