bat detector surveys are carried out by ecological consultants researchers conservationists and hobbyists understanding and categorising non bat sounds in surveys offers the potential of knock on benefits for informing development projects e g other important records discovered within a site as well as the possibility of associated conservation benefits in recent years the number of people carrying out these surveys and recording calls with bat detectors has grown considerably these surveys often generate vast amounts of audio recordings resulting in the heavy workload associated with completing the sound analysis and reporting process those carrying out analysis can be distracted intrigued or delayed owing to the occurrence of recordings that are unfamiliar and not identifiable to them these recordings can relate to difficult to id bat species but also often sounds not related to bats this can be especially true when noise triggers such as insects small mammals or birds look like bat related noise therefore only knowing what bats sound like is not enough it is extremely useful to know what other sources of noise look and sound like within the same soundscape this resource will help bat workers in whatever environment they are in to be more confident in recognising categorising and dismissing other sounds the book includes a substantial downloadable sound library wav format that readers can listen to by ear or process through sound analysis software is that a bat also caters for sounds that are also heard by ear alone in the field during the hours of darkness these scenarios often have bat surveyors intrigued or confused as to what they are listening to occasionally knowing what these sounds are could be important or at the very least of interest the first chapter caters for the subject overall including suggestions from the author as to why the subject matter is of value it also discusses bat related calls including social calls with a view to offering comparisons against the other sources of sound discussed in separate chapters continuing through the book there are chapters covering the following small mammals amphibians insects birds electrical mechanical noise and other noise nuisances within each chapter there are sub sections about bat detector

recorded sound sound by ear as well as advice on techniques and methods to reduce or increase the likelihood of recording other sounds the book concludes with associated appendices including a problem solving key to help those encountering an unfamiliar sound to narrow it down to the likely source with technology advancing at pace the technical ability of the analyst is of huge importance with a wider perspective and more knowledge those responsible for interpreting field encounters can be more confident when making decisions about sources of sound apart from that knowing stuff makes the job far more interesting and gives the bat worker a greater appreciation of the natural world within which they are working

Bats in the Anthropocene: Conservation of Bats in a Changing World 2015-12-07

this book brings together scientific evidence and experience relevant to the practical conservation of bats the authors worked with an international group of bat experts and conservationists to develop a global list of interventions that could benefit bats for each intervention the book summarises studies captured by the conservation evidence project where that intervention has been tested and its effects on bats quantified the result is a thorough guide to what is known or not known about the effectiveness of bat conservation actions throughout the world bat conservation is the fifth in a series of synopses that will cover different species groups and habitats gradually building into a comprehensive summary of evidence on the effects of conservation interventions for all biodiversity throughout the world by making evidence

accessible in this way we hope to enable a change in the practice of conservation so it can become more evidence based we also aim to highlight where there are gaps in knowledge evidence from all around the world is included if there appears to be a bias towards evidence from northern european or north american temperate environments this reflects a current bias in the published research that is available to us conservation interventions are grouped primarily according to the relevant direct threats as defined in the international union for the conservation of nature iucn s unified classification of direct threats iucnredlist org technical documents classification schemes

a leading expert in animal behavior takes us into the wild to better understand and manage our fears fear honed by millions of years of natural selection kept our ancestors alive whether by slithering away curling up in a ball or standing still in the presence of a predator humans and other animals have evolved complex behaviors in order to survive the hazards the world presents but despite our evolutionary endurance we still have much to learn about how to manage our response to danger for more than thirty years daniel blumstein has been studying animals fear responses his observations lead to a firm conclusion fear preserves security but at great cost a foraging flock of birds expends valuable energy by quickly taking flight when a raptor appears and though the birds might successfully escape they leave their food source behind giant clams protect their valuable tissue by retracting their mantles and closing their shells when a shadow passes overhead but then they are unable to photosynthesize losing the capacity to grow among humans fear is often an understandable and justifiable response to sources of threat but it can exact a high toll on health and productivity delving into the evolutionary origins and ecological contexts of fear across species the nature of fear considers what we can learn from our fellow animals from successes and failures by observing how animals leverage alarm to their advantage we can develop new strategies for facing risks without panic

over the past 20 years public concerns have grown in response to the apparent rising prevalence of food allergy and related atopic conditions such as eczema although evidence on the true prevalence of food allergy is complicated by insufficient or inconsistent data and studies with variable methodologies many health care experts who care for patients agree that a real increase in food allergy has occurred and that it is unlikely to be due simply to an increase in awareness and better tools for diagnosis many stakeholders are concerned about these increases including the general public policy makers regulatory agencies the food industry scientists clinicians and especially families of children and young people suffering from food allergy at the present time however despite a mounting body of data on the prevalence health consequences and associated costs of food allergy this chronic disease has not garnered the level of societal attention that it warrants moreover for patients and families at risk recommendations and guidelines have not been clear about preventing exposure or the onset of reactions or for managing this disease

finding a path to safety in food allergy examines critical issues related to food allergy including the prevalence and severity of food allergy and its impact on affected individuals families and communities and current understanding of food allergy as a disease and in diagnostics treatments prevention and public policy this report seeks to clarify the nature of the disease its causes and its current management highlight gaps in knowledge encourage the implementation of management tools at many levels and among many stakeholders and delineate a roadmap to safety for those who have or are at risk of developing food allergy as well as for others in society who are responsible for public health
