this questionnaire is addressed to pilots operating the b747 400 it is based on the flight crew operations manual fcom 747 509 and the flight crew training manual fctm b747 400 both published by air atlanta icelandic it is not substituting any approved bibliography and it is not covering all topics it is organized in 26 chapters in order to be compatible with the bibliography of origin it is configured under the isd method used in the air force of many states i e usaf as such it serves for studying and better understanding instead of assessing in an isd questionnaire there are no statements about equally true or false it is usually very easy to identify the true answer remember that the question serves as an excuse to provide an information not for assessing knowledge the false answers serve to increase the contrast between true and false and not to confuse the trainee and increase the level of difficulty whenever there is a choice of true or false the answer is always the true this is to prevent for a false information to be adopted whenever is asked to mark the true statements expect almost all statements to be valid this serves as an excuse to provide information not for assessing knowledge note that due to the bibliography of origin some company

the world s most iconic commercial aircraft the boeing 747 and its australian story we have decided we must have the 747 bert ritchie qantas chief executive 1967 from its first qantas flight in 1971 the boeing 747 flew millions of people to australia overseas for work back to their homelands on holiday and out of danger for most australians the 747 was their first experience of international travel and now history s most iconic

commercial aircraft is scheduled to be decommissioned around the world in this jet set nostalgia journey jim eames bestselling author of the flying kangaroo and courage in the skies tells us how the 747 a watershed in aviation technology dramatically changed air travel and recounts the high points of its life at qantas including the uplift out of darwin after cyclone tracy the return of the diggers to gallipoli and the evacuation of australians from wuhan we discover how the 747 came in all shapes and sizes eventually becoming the 747 400 which set a world distance record from london to sydney we also find out about the near misses and how close we have come to disaster on several occasions and finally we remember the 747 s farewell to australia when it departed our skies for the last time in 2020 the mighty 747 is the jumbo s australian story and is woven with the humour and nostalgia of the people at qantas who sold the 747 to australia and who made it work on the ground and in the air jim eames is a legend in the industry it s hard to imagine anyone better placed to chart the history and insider stories of the jumbo jet there s social history wry anecdotes and nostalgia aplenty weekend australian jim eames takes us on the journey of the boeing 747 the plane that dominated international travel a former leader in the airline that bet its and australia s future on the 747s jim guides us through the jet s remarkable design construction and operations that put australia on the world s stage the mighty 747 is essential reading for every person who has an interest in aviation and jim s knowledge experience and insights put him in the captain s seat to explain how boeing the 747 and qantas changed the world captain richard de crespigny am pilot in command and author of qf32 terrific philip clark abc nightlife a love story about this wonderful plane and the impact it had on so many people s lives some wonderful memories in here and some great stories as well 2gb an insightful and contemporary view some stories are humorous and all are informative each adding a piece to a half century puzzle it is about the people that made the aircraft mighty and therein lies the real soul of australia s queen of the skies airline ratings

as implied with open ended design decision making there are multiple prospective conventional and unconventional aircraft solution concepts available to satisfy a given mission specification the task of defining assessing and selecting prospective options for the mission at hand is the primary purpose of the aircraft conceptual design cd phase in addition conceptual design tends to be fast paced and requires an iterative and multidisciplinary process structure delivering fast turnaround design responses the

lack of design information available during the early conceptual design phase requires the aircraft designer to utilize lower fidelity analysis techniques that focus on overall correctness of prospective solution concepts trends and sensitivities of a new technology on the design however correctly predicting the impact of gross design decisions on mission performance drivers is a non trivial undertaking furthermore if the parametric design trends and sensitivities are correctly predicted there will not be a single solution to a given mission consequently the open ended conceptual design cd process tends to be the most abstract design phase throughout the product development cycle the aerospace vehicle design laboratory avd lab is continuously developing the aerospace vehicle design synthesis avds process aimed at supporting early fact based decision making the avds methodology contains a data base knowledge base methods library and process library that are utilized in conjunction with each other to arrive at a design solution best satisfying the mission objectives the focus of this thesis is on augmenting aerodynamic configuration prediction capability within the avds process the consistent aerodynamic evaluation of conventional and unconventional aircraft configurations throughout the flight regime poses a significant challenge to the designer this problem is attributed to the fact that no single aerodynamic prediction tool does exist with the ability to model flight vehicle configuration choices throughout the flight envelope given the nonexistence of this ideal unified aerodynamic prediction tool the designer has to organize a methods library instead thereby dealing with constant method switching and resulting inconsistency issues there are many aerodynamic methods to choose from with different capabilities and requirements digital datcom is aerodynamic prediction software with a vast selfcontained methods library for the required methods switching but it is restricted to a defined set of aircraft configuration concept the methods available in the original handbook paper version of datcom can be applied to a wider range of aircraft configuration concepts compared to its digital implementation called digital datcom given these restrictions this thesis documents further development of the digital datcom implementation into datcom max development aim of the max implementation has been to expand the existing capability towards the ability to predict key aerodynamic contributions of aircraft components and control surfaces during the conceptual design phase for a more diverse set of geometric configuration concepts the b747 200f verification and validation case study has been chosen because of the richness of the information available about this aircraft first datcom max is cross verified to match digital datcom output plus the new prediction

capability using the b747 200f model then the correctness of datcom max methods is verified against published experimental aerodynamic data for the b747 200f a user s manual and programmer s guide have been prepared to accompany the source code thereby allowing informed further development of the software in the future the research presented is a step taken to expand the capability of the avds methods library in the area of aerodynamics by removing selected process restrictions inherent in the original digital datcom the objective is to create a tool capable of producing a static and dynamic derivative database for a given aircraft design this thesis identifies the research problem the selection of aerodynamic tool for adaption the modification of digital datcom fortran 90 source code a tail aft configuration tac transport aircraft b747 200f example verifies and validates the new datcom max program

why are so many people attracted to narrative fiction how do authors in this genre reframe experiences people and environments anchored to the real world without duplicating real life in which ways does fiction differ from reality what might fictional narrative and reality have in common if anything by analyzing novels such as arundhati roy s the god of small things amitav ghosh s the glass palace zadie smith s white teeth and hari kunzru s the impressionist along with selected latino comic books and short fiction this book explores the peculiarities of the production and reception of postcolonial and latino borderland fiction frederick luis aldama uses tools from disciplines such as film studies and cognitive science that allow the reader to establish how a fictional narrative is built how it functions and how it defines the boundaries of concepts that appear susceptible to limitless interpretations aldama emphasizes how postcolonial and latino borderland narrative fiction authors and artists use narrative devices to create their aesthetic blueprints in ways that loosely guide their readers imagination and emotion in a user s guide to postcolonial and latino borderland fiction he argues that the study of ethnic identified narrative fiction must acknowledge its active engagement with world narrative fictional genres storytelling modes and techniques as well as the way such fictions work to move their audiences
