a number of species of thysanoptera thrips are  
increasingly important crop pests in many  
parts of the world as well as in some cases  
being vectors of plant disease communicating  
the known information about a species of  
organism is dependent on our ability to  
recognize or identify it accurately this book  
is a completely revised and rewritten edition  
of the standard widely used manual on these  
minute flying insects written by j m palmer l  
a mound and g j du heaume and published in  
1989 as cie guides to insects of importance to  
man 2 thysanoptera which provides a practical  
identification guide on a worldwide scale the  
previous version posed problems for students  
in terms of fluency in english knowledge of  
dichotomous keys however this thoroughly  
updated edition incorporates a new set of  
pictorial keys which have been developed and  
used very successfully for training courses at  
the international institute of entomology and  
mammalogy and which will greatly enhance the ability of the

non specialist to identify thrips to species  
individuals of these insects can usually be  
identified only by examination under a  
microscope often at high power within each  
species individuals can vary in size colour  
and shape and their appearance can be altered  
by techniques used in preparation this booklet  
describes techniques used in the preparation  
of thrip specimens onto slides for  
identification and the means of identifying  
slide mounted specimens most commonly  
encountered it also introduces students to the  
biological diversity that is found amongst the  
thysanoptera their economic importance in  
terms of both damaging and beneficial effects  
new identification techniques additional  
information and taxa glossary of technical  
terms notes on each genus described  
alphabetically within their families and  
subfamilies supplementary keys to species are  
also given within four genera that include  
several pest species caliothrips frankliniella  
scirtothrips and thrips along with new  
distribution records which have occurred since  
the publication of the first edition it is an  
essential tool for applied entomologists and  
crop protection specialists involved in the  
control of crop pest thrips and thrip

when the original edition of british  
hoverflies was published in 1983 it  
established a popular style of user friendly  
identification keys that resulted in many more  
people taking an interest in these colourful  
and attractive insects this second edition  
retains the layout and approach of the  
original but it also includes much additional  
information about the family as a whole as  
well as extended and revised species accounts  
revised by stuart ball alan stubbs ian mclean  
roger morris steven falk and roger hawkins the  
new edition includes all 276 species known  
from britain compared with 256 in the first  
edition the keys and text have been updated  
extensively to take account of our increased  
knowledge of hoverflies and some species from  
continental europe that might be expected to  
occur here are described in the keys and  
species accounts the second edition comprises  
469 pages including the 12 widely acclaimed  
original colour plates by steven falk as well  
as 17 new detailed black and white plates of  
cheilosia genitalia by steven falk and  
sphaerophoria genitalia by stuart ball the  
summaries of the distribution of species and  
their flight periods have been updated  
following the publication of the provisional  
atlas of british hoverflies in 2000 a check  
list of all british species gives the current  
nomenclature for the family while a  
bibliography of over 800 references  
facilitates access to much of the published  
literature on hoverflies this new edition
