the availability of a wide range of branded products makes the selection of the right type of goods a difficult process this is particularly true in the case of goods whose characteristics consumers do not have complete information about which they can only learn about after purchasing experiencing goods a trade mark quality guarantee facilitates consumers choice by sending quality signals it also enables a trader of branded goods to differentiate the quality of his goods from those of his competitors accordingly trade mark protection is said to enhance economic efficiency and thus the production of quality goods and reduce consumer search costs in order for this to work however among other conditions the trader must maintain consistent quality over time and across consumers otherwise trade mark protection will enhance artificial product differentiation and thus distort competition to date despite its profound significance the quality guarantee is seen as performing an economic function that trade mark law is ill equipped to deal with as a result this function is not enforced under trade mark law contrary to mainstream thinking this book argues that the quality function of a trade mark should be recognised and enforced through trade mark law what is at stake is far from insignificant it is about bridging the ever increasing gap between the legal rationales for trade mark protection and the economic consequences of this protection in practice the book is also about how consumers should shape their relationship with trade marks and what role law should play in constructing that relationship by giving independent legal substance to the quality function trade mark law encourages a trader to improve the quality of his goods instead of simply improving the persuasive or advertising value of the mark which in turn enhances artificial product differentiation increases rather than decreases consumer search costs and distorts competition

it is a pleasure to be asked to write the foreword to this interesting new book when professor bedrikovetsky first accepted my invitation to spend an extended sabbatical period in the department of mineral resources engineering at imperial college of science technology and medicine i hoped it would be a period of fruitful collaboration this book a short course and a variety of technical papers are tangible evidence of a successful stay in the uk i am also pleased that professor bedrikovetsky acted on my suggestion to publish this book with kluwer as part of the petroleum publications for which i am series editor the book derives much of its origin from the unpublished doctor of science thesis which professor bedrikovetsky prepared in russian while at the gubkin institute the original dsc contained a number of discrete publications unified by an analytical mathematics approach to fluid flow in petroleum reservoirs during his sabbatical stay at imperial college professor bedrikovetsky has refined and extended many of the chapters and has discussed each one with internationally recognised experts in the field he received great encouragement and editorial advice from dr gren rowan who pioneered analytical methods in reservoir modelling at bp for many years

this book gives plenty of examples of ad hominem attacks intimidation slander threats of litigation deception dishonesty lies and other violations of good scientific practice for some years i kept a folder labeled dishonesty in breast cancer screening on top of my filing cabinet storing articles and letters to the editor that

contained statements i knew were dishonest eventually i gave up on the idea of writing a paper about this collection as the number of examples quickly exceeded what could be contained in a single article from the introduction the most effective way to decrease women s risk of becoming a breast cancer patient is to avoid attending screening mammography screening is one of the greatest controversies in healthcare and the extent to which some scientists have sacrificed sound scientific principles in order to arrive at politically acceptable results in their research is extraordinary in contrast neutral observers increasingly find that the benefit has been much oversold and that the harms are much greater than previously believed this groundbreaking book takes an evidence based critical look at the scientific disputes and the information provided to women by governments and cancer charities it also explains why mammography screening is unlikely to be effective today all health professionals and members of the public will find these revelations disturbingly illuminating it will radically transform the way healthcare policy makers view mammography screening in the future if peter gotzsche did not exist there would be a need to invent him it may still take time for the limitations and harms of screening to be properly acknowledged and for women to be enabled to make adequately informed decisions when this happens it will be almost entirely due to the intellectual rigour and determination of peter gotzsche from the foreword by iona heath president rcgp if you care about breast cancer and we all should you must read this book breast cancer is complex and we cannot afford to rely on the popular media or on information from marketing campaigns from those who are invested in screening we need to question and to understand the story that peter tells matters very much from the foreword by fran visco president national breast cancer coalition
