what are the structures of discourse and what are the functions of these structures in the communicative context this volume explains how and why discourse is organized at various levels the multidisciplinary contributions illustrate that discourse analysis goes far beyond the linguistic answer of designing grammars and goes hand in hand with the study of their uses and functions in the social context comprehensive and accessible the volume covers a huge variety of discourse genres including written and spoken and storytelling and argumentation the chapters also illustrate the necessity to examine the mental processes of the language users how do people go about producing understanding and remembering text or talk the book stresses that both discourse and its mental processing have a social basis and can only be fully understood in relation to social interaction

## **Pgd-Based Modeling of Materials, Structures and Processes *2014-05-31***

this book focuses on the development of a new simulation paradigm allowing for the solution of models that up to now have never been resolved and which result in spectacular cpu time savings in the order of millions that combined with supercomputing could revolutionize future ict information and communication technologies at the heart of science and technology the authors have recently proposed a new paradigm for simulation based engineering sciences called proper generalized decomposition pgd which has proved a tremendous potential in many aspects of forming process simulation in this book a review of the basics of the technique is made together with different examples of application

in the modern world most gross product is created within enterprise firms project programs state agencies transnational corporations and their divisions as well as various associations and compositions of the above entities enterprises being on the one hand complex and on the other hand widespread systems are the subject matter of cybernetics system theory operations research management sciences and many other fields of knowledge however the complexity of the system obstructs the development of mathematically rigorous foundations for enterprise control moreover methods of operations research and related sciences which are widely used in practice provide optimization of the constituents of an enterprise without modeling it as a whole system but the optimization of parts does not lead to the optimality of the whole and also the absence of top down and holistic mathematical models of enterprise contradicts the principle of holism and the system approach the approach in this book looks first at enterprise systems and their essential aspects as complex sociotechnical systems composed of integrated sets of structural and process models chapters 1 and 2 a uniform description of all the heterogeneous fields of the modern enterprise marketing sales manufacturing hr finance etc is then made and the enterprise control problem is posed as a top down and holistic mathematical optimization problem chapter 3 original models and methods of contract theory chapter 4 technology management chapter 5 human behavior and human capital chapter 6 and complex activity and resource planning chapter 7 are developed to solve the problem structural processes and mathematical models constitute an optimal enterprise control framework chapter 8 that provides a practical solution to the enterprise control problem this book is a resource for postgraduate and doctoral students postdoctoral researchers and professors with research interests in the following fields of science fundamental complex systems study complex systems engineering enterprise systems engineering applications of operations research optimization probability and stochastic processes to management science economics and business theory of the firm business and management general strategy leadership organization management operations management and management information systems theory of business processes business processes improvement and reengineering

## **Discourse as Structure and Process 1997**

creativity is a powerful and elusive force it brings about scientific technological and artistic accomplishment and it allows us to adapt to changes in our lives to solve problems and to resolve conflicts it is little wonder then that cognitive psychologists have long been fascinated by the mysteries of creative thought where do people get new ideas how are they inspired to make new discoveries how is old knowledge mapped onto novel situations and how are old and mistaken ways of thinking replaced by innovative perspectives

## ***PGD-Based Modeling of Materials, Structures and Processes*** **2014-04-23**

this book aims to synthesize different directions in knowledge studies into a unified theory of knowledge and knowledge processes it explicates important relations between knowledge and information it provides the readers with understanding of the essence and structure of knowledge explicating operations and process that are based on knowledge and vital for society the book also highlights how the theory of knowledge paves the way for more advanced design and utilization of computers and networks contents introduction knowledge characteristics and typology knowledge evaluation and validation in the context of epistemic structures knowledge structure and functioning microlevel or quantum theory of knowledge knowledge structure and functioning macrolevel or theory of average knowledge knowledge structure and functioning megalevel or global theory of knowledge knowledge production acquisition engineering and application knowledge data and information conclusion readership graduate students and researchers in artificial intelligence and knowledge management

this bold and lively essay is one of those rarest of intellectual achievements a big small book in its short length are condensed enormous erudition and impressive analytical scope with verve and self assurance it addresses a broad central question how can we improve our understanding of the large scale processes and structures that transformed the world of the nineteenth century and are transforming our world today tilly contends that twentieth century social theories have been encumbered by a nineteenth century heritage of pernicious postulates he subjects each misleading belief to rigorous criticism challenging many standard social science paradigms and methodologies as an alternative to those timeless placeless models of social change and organization tilly argues convincingly for a program of concrete historically grounded analysis and systematic comparison to illustrate the strategies available for such research tilly assesses the works of several major practitioners of comparative historical analysis making skillful use of this selective review to offer his own speculative often unconventional accounts of our recent past historically oriented social scientists will welcome this provocative essay and its wide ranging agenda for comparative historical research other social scientists their graduate and undergraduate students and even the interested general reader will find this new work by a major scholar stimulating and eminently readable this is the second of five volumes commissioned by the russell sage foundation to mark its seventy fifth anniversary in this short brilliant book tilly suggests a way to think about theories of historical social

this volume presents a selection of papers showing the current focus of studies of deformation structures and processes within the continental crust the selected contributions use a large range of analytical techniques suited to the full range of structure sizes and fine tuned to the physical process that controls the deformation from the grain boundary at the micro scale the lithological contact at the meso scale to the plate boundary at the global scale the papers in the volume are grouped into three sections relating to specific lines of research within the analysis of rock deformation structures and processes in particular in respect to the continental crust structures within shear zones and faults magmatic structures and microstructures and rheology these sections include papers describing field studies experimental rock deformation and numerical modelling of deformation processes

## **Percolation Structures and Processes 1983**

the fourteenth edition of the award winning organizations behavior structure processes is based on the idea that managing people structure and processes in organizations is a challenging compelling and crucial set of tasks this book illustrates how organizational behavior theory leads to research and how both theory and research provide the basic foundation for practical applications in business firms hospitals educational institutions government agencies and other organizations readers are given the opportunity to look inside these organizations and to develop their own perspective and skills for managing organizational behavior in recognition of its educational effectiveness in 2005 the book received the text and academic authors association s mcguffey longevity award

## **Social Processes and Social Structures 1970**

the book covers the state of the art treatment in modelling and experimental investigation of the mechanical behaviour of cellular and porous materials starting from the continuum mechanical modelling to the numerical simulation several important questions related to applications such as the fracture and impact behaviour are covered

## **Structures, Processes and Governance in Tax-Policy-Making 2012**

a distinguished roster of contributors considers the state of the art of the field at the turn of the 21st century and charts an ambitious agenda for the future following what the editors describe as an evolutionist approach to the study of labor markets the chapters address issues of continuity and discontinuity in a wide range of topics including markets and institutional structures employment relations and work structures patterns of stratification in the united states and public policies opportunity structures and economic outcomes

## **Performance Management Within NatWest Consultancy 2000**

the book contains methodology for evaluating formation processes for multi component systems based on the understanding of spatial energy parameter as well as vast computation and informative material

## **Readings on the Israeli Political System 1982**

the book presents an outline of current activities in the field of biomimetics and integrates a variety of applications comprising biophysics surface sciences architecture and medicine biomimetics as innovation method is characterised by interdisciplinary information transfer from the life sciences to technical application fields aiming at increased performance functionality and energy efficiency the contributions of the book relate to the research areas materials and structures in nanotechnology and biomaterials biomimetic approaches to develop new forms

construction principles and design methods in architecture information and dynamics in automation neuroinformatics and biomechanics readers will be informed about the latest research approaches and results in biomimetics with examples ranging from bionic nano membranes to function targeted design of tribological surfaces and the translation of natural auditory coding strategies

## **Organizations 2005**

this report provides a limited review of the literature on organizational structure processes and associated problems that are amenable to diagnosis and remediation by either leaders or organizational consultants within this limited scope dominant technology impact on structure and process is discussed and guidelines are provided for the development of a strategy of organizational diagnosis focusing on either structure or organizational process antecedents author

## **Big Structures, Large Processes, Huge Comparisons 1989-04-24**

how can business leaders and organization development professionals enable their companies to succeed in a digital age use the second edition of agile transformation to improve business performance packed full of practical advice this new edition features updates on data driven decision making and the importance of putting it at the centre of mindset change and transformation to empower teams to make decisions as well as updates to case studies there is extended material on agile structures including team alignment developing agile culture and leadership agile transformation covers all aspects of business transformation including why new operating models are needed how to apply agile principles at scale leveraging digital native processes and why change managers need to think big but start small it also looks at how to build and engage high performing teams for change how to tackle employee mindsets that can hinder agile adoption and why developing an agile business is not a reason to fail to plan featuring case studies from organizations including amazon netflix and vodafone this is crucial reading for businesses wanting to effectively compete in the new world of work

this contributed volume collects the scientific results of the dfg priority program 1180 prediction and manipulation of the interactions between structures and processes the research program has been conducted during the years 2005 and 2011 whereas the primary goal was the analysis of the interactions between processes and structures in modern production facilities this book presents the findings of the 20 interdisciplinary subprojects focusing on different manufacturing processes such as high performance milling tool grinding or metal forming it contains experimental investigations as well as mathematical modeling of production processes and machine interactions new experimental advancements and novel simulation approaches are also included

## **Psycholinguistics Series 1977**

chemical process structures and information flows focuses on the role of computers in the understanding of chemical processes including the use of simulation and optimization in computational problems the book first underscores graphs and digraphs and pipeline networks discussions focus on cutsets and connectivity directed graphs trees and circuits matrix representation of digraphs and graphs reachability matrix alternative problem formulations and specifications and steady state conditions in cyclic networks the manuscript also ponders on computation sequence in process flowsheet calculations and sparse matrix computation the publication examines scheduling and design of batch plants including scheduling of products and operations characteristics of batch processes branch and bound methods and multipurpose batch plants the text also elaborates on observability and redundancy and process data reconciliation and rectification the manuscript is a valuable reference for chemical engineering students and readers interested in chemical processes and information flow

suserup skov in denmark is a well preserved beech dominated forest reserve with continuity in tree cover at least back to 4200 bc indicating it to be a direct descendent of the primeval forests despite of documented historical impact from humans suserup skov is now increasingly characterized by natural disturbance dynamics and is one of the best reference areas for naturalness in the nemoral part of northern europe this has attracted several research projects focussing on forest dynamics ecology and biodiversity which are summarized in this issue of ecological bulletins this volume focuses on three main areas 1 stand structures and dynamics 2 water and nutrient cycling processes and 3 vegetation patterns and processes with a compilation of scientific reviews detailed case studies and experimental works the volume provides a unique and in depth overview of structures and processes in a single forest reserve the aim is to establish a basic reference of science and practice within forestry and nature conservation

## **Cellular and Porous Materials in Structures and Processes 2011-01-27**

many concrete structures and elements of concrete infrastructure roads bridges etc have exceeded their original design lives and are deteriorating to an extent where they are becoming dangerous this breakdown can be internal or not obvious and therefore becomes evident only through detailed testing older methods of testing often involved damaging the structure but this book provides a comprehensive review of the vital subject of the latest non destructive evaluation of reinforced concrete structures it provides an overview of deterioration and reviews classic testing methods as well

## **Spatial-Energy Principles of the Processes for Complex Structure Formation 2005-01-01**

this book offers an update on recent developments in modern engineering design different engineering disciplines such as mechanical materials computer and process engineering provide the foundation for the design and development of improved structures materials and processes the modern design cycle is characterized by the interaction between various disciplines and a strong shift to computer based approaches where only a few experiments are conducted for verification purposes a major driver for this development is the increased demand for cost reduction which is also linked to environmental demands in the transportation industry e g automotive or aerospace the demand for higher fuel efficiency is related to reduced operational costs and less environmental damage one way to fulfil such requirements is lighter structures and or improved processes for energy conversion another emerging area is the interaction of classical engineering with the health and medical sector

## **Biomimetics -- Materials, Structures and Processes 2011-07-06**

the concept of dynamic capabilities especially in terms of organizational knowledge processes has become the predominant paradigm for the explanation of competitive advantages however major unsolved or at least insufficiently solved problems are first their measurement and second their management by concrete managerial options such as design options of organizational structures dynamic capabilities provides an integrated descriptive model of both dynamic capabilities and organizational structures that allows characterizing classifying and a comparison it develops a logic system of a multitude of combinatorial possibilities between their variables and it develops a complex and integrated system of associated empirically based and qualitatively deduced hypotheses therewith it serves as a terminological and analytical foundation for the identification of knowledge based dynamic capabilities in organizations and for a targeted design of organizational structures that enable and foster dynamic capability processes such as knowledge transfer and knowledge absorption
