the recent terrorist attacks non citizen residents had become subject to an increasingly harsh regime of detention and deportation and prospective employees subjected to background checks how and when did our everyday world become dominated by fear every citizen treated as a potential criminal in this startlingly original work jonathan simon traces this pattern back to the collapse of the new deal approach to governing during the 1960s when declining confidence in expert guided government policies sent political leaders searching for new models of governance the war on crime offered a ready solution to their problem politicians set agendas by drawing analogies to crime and redefined the ideal citizen as a crime victim one whose vulnerabilities opened the door to overweening government intervention by the 1980s this transformation of the core powers of government had spilled over into the institutions that govern daily life soon our schools our families our workplaces and our residential communities were being governed through crime this powerful work concludes with a call for passive citizens to become engaged partners in the management of risk and the treatment of social ills only by coming together to produce security can we free ourselves from a logic of domination by others and from the fear that currently rules our everyday life

annotation far reaching transformations in the nature of contemporary governance can be observed within and beyond the nation state at the heart of these transformations jonathan zeitlin argues is the emergence of new forms of experimentalist governance based on framework rule making and revision through comparative review of alternative approaches to advancing common objectives in different local contexts the proliferation of these new organizational forms can best be understood as a response to increased environmental volatility and complexity which have overwhelmed in many settings the capacities of conventional hierarchical governance and command and control regulation although robust examples can be found in many jurisdictions including the united states the epicenter of these developments is the european union where experimentalist governance arrangements have been institutionalized across a wide range of policy domains over the past 15 years these have not only facilitated the extension of european integration into new politically sensitive policy fields but also enabled the eu in many areas to produce high quality revisable rules capable of broad application across a diverse polity of 500 million inhabitants and 27 member states in this inaugural lecture zeitlin analyzes the properties of these experimentalist arrangements examines their development within the eu and opens up new research questions about their influence on governance processes within the member states and beyond the union s borders this title can be previewed in google books books google com books vid isbn9789056296742
