business academia industry and the military require well trained personnel to function in highly complex working environments to reduce high training costs and to improve the effectiveness of training training system developers often use sophisticated training media such as simulators videodisks and computer based instruction the designers of these training media are continually striving to provide maximum training effectiveness at minimum cost although literature is available on the implementation and use of specific training media there is little guidance on a major feature that is central to these media all of these media present the learner with an interactive simulation of the real world effective training system design can be facilitated if the requirements of the real world task are

properly included in training a conceptual bridge is necessary to link these actual task requirements to the characteristics of the training system this book provides such a conceptual bridge the need for improved training is critical in the area of equipment operation maintenance and decision making tasks for example the importance of improved operator training in the nuclear power industry has become paramount since the three mile island accident and the more serious accident at the chernobyl reactor in the u s s r technology such as the availability and power of computers offers a wider variety of training options but requires additional training system design decisions

this paper examines measures used by studies associated with preschool curriculum evaluation research initiative pcer funded by the institute of education sciences analysis of 17 measures of fidelity used by 13 curriculum interventions highlights how research in preschools is and is not measuring fidelity of implementation the following research questions are pursued 1 in what ways do the measures used in these studies represent the three primary elements of implementation a adherence b exposure and c participant responsiveness and 2 do studies effectively use measures to differentiate between teachers fidelity to crucial elements of the curriculum and teachers general instructional quality i e high fidelity as compared to good teaching overall analysis of these 16 fidelity measures reveals that the corresponding preschool studies insufficiently measured the primary components of fidelity in many cases the measures used in these studies were more effective at assessing general

students in the united states are exiting high school with poor reading skills to improve reading skills a consensus exists that schools should use research based curriculum and provide on going professional development for teachers this study examined the use of direct instruction adams engelmann 1996 curriculum with students in special education at the high school level and measured the effects literacy coaching had on teacher fidelity of instruction and subsequently on students results indicated a students with learning disabilities at the treatment school performed reliably better on a measure of reading progress compared to peers at two comparison schools b teachers at the treatment school had the highest fidelity ratings c students at all schools improved their reading achievement regardless of the degree to which they implemented instruction with high fidelity these results were interpreted to show that on going professional development in the form of a direct instruction coach has positive effects on teacher fidelity and student reading achievement
