learn about commercial spaceflight s most successful startup in this fully updated book which follows the extraordinary feats of engineering and human achievement that have placed spacex at the forefront of the launch industry and positioned it as the most likely candidate for transporting humans to mars this second edition emphasizes spacex s much hyped manned mission to the red planet with a plethora of new material gathered from 2013 to the present the text offers the most up to date portrait of the maverick band of scientists and engineers producing some of the most spectacular aviation triumphs of the 21st century topics covered in this book include all crs flights the challenges of developing retro propulsion and the pathway towards realizing the falcon heavy and bfr in addition the chapters describe spacex s emphasis on simplicity low cost and reliability and the methods the company employs to reduce its costs while speeding up decision making and delivery detailing the falcon 1 falcon 9 and falcon heavy launch vehicles the book shows how spacex is able to offer a full spectrum of light medium and heavy lift launch capabilities to its customers and how it is able to deliver spacecraft into any inclination and altitude from low earth orbit to geosynchronous orbit to planetary missions this book is the perfect go to guide on spacex for anybody working or interested in the commercial space arena

Noncommutative Geometry

2003-12-08

noncommutative geometry is one of the most deep and vital research subjects of present day mathematics its development mainly due to alain connes is providing an increasing number of applications and deeper insights for instance in foliations k theory index theory number theory but also in quantum physics of elementary particles the purpose of the summer school in martina franca was to offer a fresh invitation to the subject and closely related topics the contributions in this volume include the four main lectures cover advanced developments and are delivered by prominent specialists

Springer Handbook of Mechanical Engineering

2009-01-13

this resource covers all areas of interest for the practicing engineer as well as for the student at various levels and educational institutions it features the work of authors from all over the world who have contributed their expertise and support the globally working engineer in finding a solution for today s mechanical engineering problems each subject is discussed in detail and supported by numerous figures and tables

Merchants of Doubt

2011-05-31

documents the troubling influence of a small group of scientists who the author contends misrepresent scientific facts to advance key political and economic agendas revealing the interests behind their detractions on findings about acid rain ddt and other hazards

selected topical problems of mathematical physics are being dealt with by emphasizing methodical aspects for this reason also questions regarding mathematical model building are being discussed the book contains the papers presented at the conference in oberwolfach organized by prof dr b broowski and prof dr e martensen the contributors are the following renowned mathematicians and physicists rainer kress peter jochum miloslav feistauer eberhard halter jurgen scheurle r e kleinmann g f roach hermann sohr horst lange erik b hansen rainer colgen johann baumeister zdenek vlasek ulrich elsasser zdzislav domanski and r rautmann

Fizika, narava, življenje

2005

imre lakatos 1922 1974 was one of the protagonists in shaping the new philosophy of science more than 25 years after his untimely death it is time for a critical re evaluation of his ideas his main theme of locating rationality within the scientific process appears even more compelling today after many historical case studies have revealed the cultural and societal elements within scientific practices recently there has been above all an increasing interest in lakatos philosophy of mathematics which emphasises heuristics and mathematical practice over logical justification but suitable modifications of his approach are called for in order to make it applicable to modern axiomatised theories pioneering historical research in england and hungary has unearthed hitherto unknown facts about lakatos personal life his wartime activities and his involvement in the political developments of post war europe from a communist activist committed to györgyi lukács thinking lakatos developed into a staunch anti marxist who found his intellectual background in popper s critical rationalism the volume also publishes for the first time a part of his debrecen ph d thesis and it is concluded by a bibliography of his hungarian writings

this is a collection of invited papers from the 1975 international symposium on multiple valued logic also included is an extensive bibliography of works in the field of multiple valued logic prior to 1975 this supplements and extends an earlier bibliography of works prior to 1965 by nicholas rescher in his book many valued logic mcgraw hill 1969 there are a number of possible reasons for interest in the present volume first the range of various uses covered in this collection of papers may be taken as indicative of a breadth which occurs in the field of multiple valued logic as a whole the papers here can do no more than cover a small sample question answering systems analysis of computer hazards algebraic structures relating to multiple valued logic algebra of computer programs fuzzy sets second a large part of the interest in such uses and applications has occurred in the last twenty even ten years it would be too much to expect this to be reflected in rescher s 1969 book third in the 1970 s a series of annual symposia have been held on multiple valued logic which have brought much of this into a sharp focus the 1971 and 1972 symposia were held at the suny at buffalo the 1973 symposium at the university of toronto and the 1974 symposium at west virginia university papers from these symposia are included in the bibliography which may be found in an appendix of this book
