Home Schooling... A Pathway to Success 2018-09-11 the compartmentation of genetic information is a fundamental feature of the eukaryotic cell the metabolic capacity of a eukaryotic plant cell and the steps leading to it are overwhelmingly an endeavour of a joint genetic cooperation between nucleus cytosol plastids and mitochondria alteration of the genetic material in anyone of these compartments or exchange of organelles between species can seriously affect harmoniously balanced growth of an organism although the biological significance of this genetic design has been vividly evident since the discovery of non mendelian inheritance by baur and correns at the beginning of this century and became indisputable in principle after renner s work on interspecific nuclear plastid hybrids summarized in his classical article in 1934 studies on the genetics of organelles have long suffered from the lack of respectability non mendelian inheritance was considered a research sideline if not a freak by most geneticists which becomes evident when one consults common textbooks for instance these have usually impeccable accounts of photosynthetic and respiratory energy conversion in chloroplasts and mitochondria of metabolism and global circulation of the biological key elements c n and s as well as of the organization maintenance and function of nuclear genetic information in contrast the heredity and molecular biology of organelles are generally treated as an adjunct and neither goes as far as to describe the impact of the integrated genetic system

Excel HSC Biology 2020-05-27 there is a small village on the river madhumati on account of its being the residence of wealthy zemindars it is regarded as a village of importance one chaitra afternoon the summer heat was gradually abating with the weakening of the once keen rays of the sun a gentle breeze was blowing it began to dry the perspiring brow of the peasant in the field and play with the moist locks of village women just risen from their siesta it was after such a siesta that a woman of about thirty was engaged in her toilet in a humble thatched cottage she took very little time to finish the process usually so elaborate with womankind a dish of water a tin framed looking glass three inches wide and a comb matching it sufficed for the task then a little vermilion adorned her forehead last of all some betel leaves dyed her lips thus armed a formidable champion of the world conquering sex set out with a pitcher in her arm and pushing open the wattled gate of a neighbouring house entered within it there were four huts in the house which she entered they had mud floors and bamboo walls there was no sign of poverty anywhere everything was neat and tidy the four huts stood on the four sides of a quadrangle of these three had entrances opening on the yard the fourth opened outwards this last was die reception room while the others screened on all sides constituted the zenana some brinjals and salads were growing on the carefully tilled plot of land in front of die raised terrace before the outer room the whole was enclosed by a reed fence with a bamboo gate so the woman could easily make her way into the house it is superfluous to add that she went straight towards the zenana i know not where the other inmates of the house had gone after their siesta but at that time there were only two persons there one a young woman of eighteen bent over her embroidery and a child of four immersed in play his elder brother had wilfully left his ink pot behind when going to school the child s eyes had fallen on it and

he was joyfully smearing his face with die ink he seemed to be afraid of his brother coming back and snatching the ink pot away and so he was emptying the pot the newcomer sat down on the floor by the side of her who was working and asked what are you doing
